Raising the Sheep

FOURTH GENERATION FARMER

Wool is in Julian von Blon's blood, he is the fourth generation of von Blon to run sheep in Australia—a sprawling farm situated in the heart of Tasmania. He and his wife Renata own the property that produces 150 tonnes of fine Merino wool a year sourced from the over 2,000 sheep that live on their property. "It's a pretty good place. The land is a kind of native bush where the sheep are very, that's definitely unique."

Recently the von Blons, along with Tasmanian Merino and Thergans, have been part of a combined effort to produce and market single origin Tasmanian wool to the world. "We had a couple of meetings to put forward our idea of single source, Tasmanian origin, wool," said Master Colonel of Tasmanian Merino. "Then the Tilligons called in Italy and they're excited of this idea and ran with it. It's been an interesting journey over the past few years, we've learnt a lot. We had a great concept and a big idea, but it wasn't necessarily something that we had seen before or were used to. Now we supply them with about 60 tonnes of top gun wool, which produces about a quarter of a million garments."

"For brands and I'll have a way of getting closer to our customers," says Julian. "On the one hand, it's a producing idea of wool and raising sheep, we can sometimes get into the market. On the one hand, it's the opportunity to get into the market. On the one hand, it's the opportunity to get into the market. On the one hand, it's the opportunity to get into the market. It gives you a sense of direction and allows you to really focus on what you're doing."

Once the wool leaves the farm, it's taken to Italy, where it is processed using water that runs from the Dolomites Alps. "This is the best spinner in the world as in Italy," says Dieter Bader of Thergans who has taken the journey of the Tasmanian wool to Italy and then into the manufacturer. "It's really the

place for Merino, everyone in the world looks here. The wool produced from this farm is considered top 200 wool, which is every five grade of wool and every fibre. It means the water the Italians use is very pure and it's used in the treatment and handling of the wool and the dyeing process. It's used to produce the softest, finest garments."

But what is also well regarded for its conservation efforts, Julian believes taking care of the land is critical. "We've managed the woody area, gums and hardwoods and willow, and we've managed the area to keep it and other native species in the environment," he said. His passion for conservation is genetic; his father began re-planting more than a generation ago, but his mother was at it with his more conservative parents. Thanks to his and Julian's ongoing commitment, the von Blon family has successfully reforested 600 hectares of land on their property.

Wildlife on the farm is plentiful in our two-hour visit we saw an echidna, an emu and a mob of kangaroos. The farm also plays host to kangaroos and wild quail and from anywhere about the world. The sheep are all used in the local paddock during the winter and during summer, so that they can find shelter. Beyond that, the land is looked after and treated. "We're lucky to have that balance we have the wool," says Julian. "We're pretty much in the middle of the range, the native bush at all other times, so it's keeping an eye on that surface so that they have enough water and enough food. They're a pretty good life trapping through the wool and wool of the land."

"May is the best time to visit, it's not too hot, it's not too cold. It's when we have the good. We're lucky to have a team of professional shears and a few more staff members, so there are definitely some people in the farm. It's not a very easy job, you know, and you really can't do it on the weekend."

HEALTH & WELLBEING

WOOL FACTS

WOOL IS GOOD FOR THE SKIN

Recently published research has demonstrated that wearing superfine Merino wool next to the skin is therapeutic for eczema sufferers. This adds to a growing number of research findings supporting the health and wellbeing benefits of superfine Merino wool. The research has shown that Merino wool assists those suffering from this chronic skin condition, challenging misconceptions that all wool is prickly and itchy.

WHAT IS ECZEMA?

Eczema, or Atopic Dermatitis, is an allergic condition where the skin becomes dry, leading to cracking, bacterial infection, redness and itching. It affects around 30% of children and its prevalence varies geographically. The most common treatments currently include the regular application of moisturisers and topical steroids to reduce inflammation, as well as antibiotics to address infection.

Summary

- Wool prices increasing and supply increasing = greater demand for Australian wool
- Trends for environmentally friendly fibre options that meet lifestyle, health and wellbeing needs are positive signs for wool
- As Nike says, 'There is no finish line.'
